

DIMENSIONAL FUND ADVISORS CANADA INC.

DFA INTERNATIONAL CORE EQUITY FUND

DEFINING CORE EQUITY

The DFA International Core Equity Fund invests in non-Canadian and non-US companies with a modest tilt toward small cap stocks and value stocks. The Fund may currently invest in the developed markets of Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Italy, Japan, The Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and the United Kingdom. It is also authorized to invest in the following emerging markets: Brazil, Chile, Czech Republic, Hungary, India, Indonesia, Israel, Malaysia, Mexico, Philippines, Poland, South Africa, South Korea, Taiwan, Thailand, and Turkey. The countries authorized and in which the Fund actually holds investments will change from time to time.

Dimensional Fund Advisors ("Dimensional"), the sub-advisor of the DFA International Core Equity Fund, determines a company's size by measuring its market capitalization in each market. Market cap is calculated by multiplying a stock's price by the number of shares outstanding. Dimensional primarily uses the ratio of a company's book value to its market value (BtM) in order to determine its placement on the value/growth spectrum. When assessing value, Dimensional may also consider other factors such as a company's price-to-cash-flow ratio and price-to-earnings ratio.

Research conducted by Professors Eugene Fama and Kenneth French found that small cap stocks and value stocks have higher expected returns over long periods. Small stocks and value stocks generally have a high level of risk. Because risk and return are directly related, this higher risk provides small and value stocks with higher expected returns.

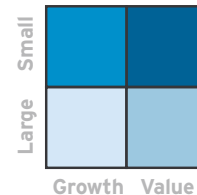

CONSTRUCTING THE FUND

Stocks in the international market are divided into BtM categories. To achieve a value tilt relative to the market, the fund's target weights are increased for stocks in the value (highest BtM) category and decreased for those in the growth (lowest BtM) category. On average, this process moves about 20% of the fund from the growth category to the value category.

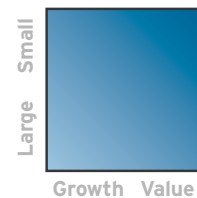

The fund's small cap exposure is enhanced by increasing the target weight of small stocks relative to their market weight. Currently, the minimum market cap for eligible stocks in the DFA International Core Equity Fund is \$25 million. As a result, the fund is more broadly diversified by including securities smaller than the MSCI EAFE Index. In addition, about 15% of the portfolio from the largest stock category is invested across the smaller size category.

INTEGRATED SOLUTION

Smooth, cost-effective exposure to the market

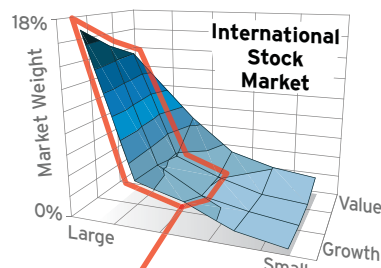

Traditional asset allocation uses components that segment a portfolio.

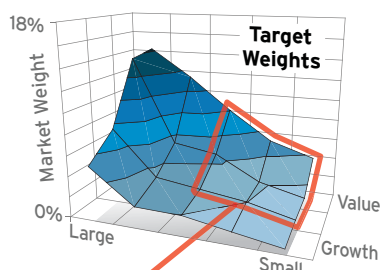

Core Equity provides multifactor-tilted exposure to the entire market.

PORTFOLIO CONSTRUCTION

Value and small factor-tilts on the whole market

Most market capital is in large cap and growth stocks.

Target weights are increased for small cap stocks and value stocks.

FOCUSING ON THE ASSET CLASSES

To refine the eligible universe of stocks further and achieve focused exposure to the size and value asset classes, exclusion screens are applied. The DFA International Core Equity Fund's first screen eliminates from consideration stocks that are not part of the asset class (such as holding companies). As of March 31, 2008, this process eliminated 785 of the 13,286 stocks in the initial universe. Additional screens for pricing concerns and trading concerns removed 6,327 stocks from consideration. The result was an eligible buy list of 6,174 stocks that Dimensional believes keeps the strategy precisely focused on the asset classes.

THE RESULT: BROADER REPRESENTATION OF THE MARKET

Dimensional's strategies are engineered to capture the factors that drive returns. Intelligent engineering and trading expertise result in the DFA International Core Equity Fund's broader diversification and stronger exposure to the higher expected returns of small cap stocks and high BtM stocks.

EFFECTIVE TRADING PRACTICES

Trading costs matter. Dimensional uses its capacity, reputation, and expertise to manage trading costs. Because Dimensional does not index, we can practice patient trading, focusing on price rather than time of execution. We can design our strategies to mitigate the effects of momentum. As a whole, this disciplined trading approach means lower trading costs that can directly benefit our clients.
